ITU FACULTY of COMPUTER and INFORMATICS ENGINEERING

ITU, Computer Engineering Dept
MAT271E, Probability and Statistics
Final Exam

Date: June 09 - 15:00
Duration: 25 minutes per question

Instructor: Prof. Dr. Ahmet Hamdi Kayran
Teaching Assistant: Tolga Ok (okt@itu.edu.tr)

- **Solve the exam on your own.** You must complete the exam questions independently. Cheating, in any form, is **strictly prohibited** and can have serious consequences.
- **Late submissions will not be accepted**. Please do not email us your late submissions. You are expected to submit your solutions only through Ninova before the due date.
- Write out the solutions to each question on an A4 paper using an **unerasable pen**. Use at least one page per question and use only one side of the paper, and remember to include your name, ID, and signature on each paper. Merge the images of each paper in a pdf file with the correct rotation.
- **Show your work**. To get a good grade, make sure to include all the necessary steps in your solution. Displaying the intermediate steps instead of going directly to the conclusion is important.
- The final exam contributes **40%** to your overall grade.

Question 4 [20 pts]

Julia goes for a jog every day and runs an additional distance. The distance she jogs, denoted by x, varies uniformly between 1 and 5 kilometers. The running distance follows a conditional exponential distribution with a parameter of $\lambda(x) = \frac{1}{6-x}$.

a) What is the expected running distance? (Marginal expectation)

b) What is the expected distance she covers during her exercise?
